

The Combi-Lox design incorporates security for both the TFT screen and computer.

Two options are available:

- **full access** to the computer drives and USB sockets, or
- **restricted access**

The unit is made from **2mm and 3mm welded steel construction** and is designed to suit your individual security requirements.

The plunger **locks can be keyed alike or keyed to differ.**

Combi-Lox can be **screwed or bolted to the desk**, counter or shelf through the six countersunk holes in the base.

Alternatively we offer a **wall mounted** custom option.

Cables are managed within the enclosure.

When unlocked the two elements of the body slide apart for ease of access for everyday maintenance.

Combi-Lox is one of the neatest solutions available today, providing a uniform look within the classroom.

It creates a tidy, secure housing solution with the strength to withstand today's classroom environment.
