

Fold away platform allows pupils to reach all parts of the interactive whiteboard

The Loxit Step-Up folds back against the wall under the overhanging whiteboard when not in use and the legs are recessed behind the face of the board.

The Step-Up platform is stored with the weight over centre and leans against the wall. A safety catch is provided as standard.

As the platform is lowered the legs automatically drop into the vertical position where they are held at all times.

All hinges and linkages are designed to avoid trapped fingers.

The top is through bolted to the support frame for structural solidity.

When the platform is in its fully lowered position the legs are still held vertically and locked in place.

The rear legs are attached to the floor with eight bolts to provide a safe and stable stage 1200mm long by 550mm wide with a working height of 320mm.

The Step-Up is designed to enable pupils interact with the whiteboard and be seen by all the class.

1200mm x 550mm 320mm high - 8110

Forget stools and boxes

Allow your pupils to access the whiteboard in a safe and controlled manner
