

Universal Projector Wall Booms

Stylish, Effective and Easy to Install

Universal Fixed Projector Wall Boom Kit

Simple, stylish, universal, easy to install projector wall mounts.

The universal fixed projector boom kit includes a universal wall projector wall plate, chrome tube boom up to 1700mm length and a universal projector mount plate.

Universal Projector Wall Plate

The universal projector wall plate is a stylish, cost effective and versatile projector wall mount system which can accommodate virtually all types of projector, mounted on a chrome boom system.

The chrome boom has a safety feature of a crumple zone to allow the pole to bend in a controlled manner if massively overloaded, by for example a pupil swinging on it.

In this event, only the pole would need to be replaced, leaving the wall plate attached with its fixings.

Universal Projector Mount Plate.

Simple to fit, and designed for versatility. Slide the projector mount along the chrome pole to accommodate different board sizes and fix when in the correct position.

The universal projector mount plate design enables fitting to virtually any standard size projector. Loxit's steel feet screw into the projector's own thread.

Once attached to the projector, the feet are fixed to the steel plate which has multiple slots for convenience and the feet may be rotated to locate the most suitable fixing point. Simple.
